

# Barge Channel

*St. Paul, Minnesota*

---

**Type:** Heavy industrial

**Location:** Saint Paul, Minnesota

**Size:** 18 Acres Site

---

## Project Description

This project involves the installation of approximately 1,300 linear feet of sheet pile wall along the northerly side of the existing barge channel for the purpose of expanding the lease area for the St Paul Port Authority. This expanded area will be used by the harbor operator to clean and repair Mississippi River traffic barges. The scope of this project also includes a new sanitary sewer, water-main, storm sewer and rain garden design. Nick Mannel was responsible for the EAW process.
